

We are very pleased to inform you that Professor Catherine Fenselau, HUPO Senior Vice President, Analytical Chemistry's associate editor for MS and professor at the University of Maryland College Park, won the ACS 2008 Field and Franklin Award for Outstanding Achievement in Mass Spectrometry for her sustained excellence in the application of MS to fundamental biomedical problems and for service to her profession. Fenselau's work has encompassed bacterial characterization, the "middle molecules" concept, isotopic distributions in larger molecules, and enzymatic proteolysis to incorporate <sup>18</sup>O labels into peptides.

Congratulations to Professor Fenselau.
